USER ACCEPTANCE TESTING (UAT) REPORT

Assignment 6 – Final Application Acceptance

1. Project Information

Project Name	ChorePal
Team #	Team 2
Team Member Names	Sam Angulo, Doreen Lobe, Isaac Lindsay, Cole Brooks, Adam Jabbar
Client / Product Owner	Diana Rabah
Role	Product Owner / Client Evaluator
Report Date	October 9, 2026

2. Summary of Testing Process

When: UAT was conducted on October 1st and 8th, 2026. We had Team 1 and Team 3 test our mobile application by giving them two devices, one acting as the parent device and the other as the child device.

Where: Testing was performed in the classroom by different team members using our personal devices.

How: We had other teams act as both the Parent and Child Users. Their testing covered account creation, authentication, creating chores/rewards, chore submission using ChorePal verification, parent approval/rejection, rewards, and logging out. With Team 3 testing a week before Team 1 we made sure all issues presented in Team 1 were fixed and retested by Team 3.

Testing Environment

Application Version	ChorePal v1.0
Platform / Framework	Mobile Application using Firebase Backend
Devices	iOS (iPhone)
Operating Systems	iOS 17+
Backend / Services	Firebase Authentication, Firestore, Storage
Network Conditions	We created a Tunnel using Expo Go.

3. UAT Test Results

Test ID	User Scenario	Expected Result	Actual Result	Status	Notes
UAT-01	Parent / Child Registration & Login	Users are able to register using a valid email and dashboard loads. The Forgot Password button works.	Registration and login completed successfully. Dashboard loaded immediately. Forgot password flow is working.	**PASS**	Forgot-password flow also verified working after fix.
UAT-02	Parent creates child account & family code	Parents are able to create child accounts, they are able to easily copy and use that family code to sign in.	Child accounts created successfully. Family code visible and copyable; children can join with code.	**PASS**	Child code is easily found and easy to copy to send to a child account.
UAT-03	Parent creates chore with deadline, priority & coins	Chores require all fields to be filled in. The calendar deadline works correctly, and max coins are set.	Chores did require all fields to be typed in. The calendar now works and assigns chores on the correct due date. Max coins are set.	**PASS**	The calendar now shows the correct due date. Parents cannot set over 100 coins on a chore.
UAT-04	Parent creates reward	Reward is created and saved with description as well as max coin cost. Appears in the child account.	Reward was created with the description and correctly shown in the child account.	**PASS**	The edit function also works correctly.
UAT-05	Child views assigned chores & submits photo	The child is able to see the assigned chores on the correct date, and upload a photo for completion without crashing.	Chores were displayed on the correct date. The entire chore is easily clickable. Photo upload did not crash.	**PASS**	Whole-chore clickability and date assignment issues fixed.

UAT-06	AI / system feedback on submitted chore photo	The ChorePal Verification system encourages appropriate feedback for a chore submission.	The feedback generated displayed correctly and was relevant to the photo. All feedback was appropriate and encouraging.	**PASS**	New client feature (chore photo feedback) confirmed to be working correctly.
UAT-07	Parent approves / rejects completed chore & sends feedback	Parents are able to approve or reject child submissions. Feedback is sent to the child.	Approval and rejection flows worked correctly. Children are able to see feedback generated by parents.	**PASS**	Parent generated feedback is now correctly sent to child accounts.
UAT-08	Coins awarded & reward page updates	Coins are added upon parent approval. The reward page reflects updated balance.	Coins are added to the child account after parent approval is done. Page immediately updates with correct reward balance	**PASS**	Rewards page update is now fixed.
UAT-09	Parent dashboard – view/edit/delete child accounts	Parents should be able to click on child accounts to see their family code, chores, or edit their profile.	The parent account is now able to click on child accounts to see their family code, chores, and edit their profile/pin.	**PASS**	The child details button is now working correctly..
UAT-10	Logout (Parent & Child)	The logout button on the child side is easily discoverable and returns to the login screen.	Logout is really easy to find and it functions correctly.	**PASS**	The logout button is now easily discoverable.

Summary: All 10 scenarios now passed.

4. Defect Log

All defects discovered during earlier peer testing and internal QA were resolved prior to formal UAT. The table below records those defects and their final resolution status for traceability. No new defects were identified during UAT execution.

Defect ID	Description	Severity	Status	Resolution
DEF-01	The child reward page balance was not updating properly.	Minor	**Resolved**	We added a refresh button.
DEF-02	Chore Priority setting did not work. It would not affect chores on the child dashboard in any way.	Minor	**Resolved**	Updated child dashboard to sort chores by priority.
DEF-03	The logout button was difficult to find.	Cosmetic	**Resolved**	Although the button previously worked, it was difficult for users to locate. We made it much easier to find.
DEF-04	The whole chore on the child dashboard was not clickable as only the small upload button was clickable.	Minor	**Resolved**	We made the entire chore card clickable.
DEF-05	Chores were not assigned to the correct date.	Major	**Resolved**	Fixed the date filtering so that it would assign chores on the correct dates.
DEF-06	Chore deadlines were not saved correctly and the calendar was always a day behind.	Critical	**Resolved**	We fixed the calendar as well as the deadlines showing up correctly.
DEF-07	The parent dashboard did not have a way to click on child accounts to edit or view their family code.	Major	**Resolved**	We added a child details page that when clicked allows you to see a copyable family code as well as edit child accounts.
DEF-08	No maximum limit on coins when creating chores and rewards. They were able to set a chore that gave a million coins.	Minor	**Resolved**	We added Max-coins validation on chore creation and reward creation.
DEF-09	Parent feedback was not being sent to the children.	Major	**Resolved**	Feedback is now visible to the child by clicking on the chore that was approved/rejected.
DEF-10	The keyboard was blocking the description and feedback input fields.	Cosmetic	**Resolved**	We adjusted the app layout so it wouldn't block the feedback/description input fields.
DEF-11	Forgot Password flow did not work on the login page.	Minor	**Resolved**	Password-reset flow is now implemented into our app and sends an email to reset your password when requested.

Conclusion: We resolved all defects that were found in the first and second UAT.

5. Client Feedback

The following observations and feedback were collected from the Product Owner (Instructor) and peer evaluators during and after testing sessions:

- All core features are functional, Team 1 and 3 both really liked the ChorePal Verification feature
- The new client feature of ChorePal Feedback Analysis worked as intended and helps children accomplish their chores more efficiently.
- Team 3 really liked the updated UI on the Child Dashboard, they said navigation was really clear.
- Team 3 noted that the app looks ready for deployment.
- They suggested making the parent UI a bit more polished as it is looking a bit plain.
- Team 1 stated “If I had kids I would totally use this app to track and manage chores”.
- All usability ratings after all the fixes went from Good to Excellent.

6. Final Approval Statement

Acceptance Status:

☑ **Full Acceptance**
☐ Conditional Acceptance
☐ Rejection / Revision Required

The ChorePal application has successfully completed User Acceptance Testing.
